## Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136 (a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133).
- Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

## DETAILED ACTION

### *Claim Rejections - 35 U.S.C. § 103*

1. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

2. Claims 1-17 are rejected under 35 U.S.C. 103(a) as being unpatentable over Kinugawa et al.'811 (Kinugawa) in view of Ullmann '733. Kinugawa discloses a totally electrically driven earthworking device having a battery setup 2, electric motor 3 and hydraulic pump 4. Further, Kinugawa discloses various controls necessary to measure oil pressure levels and charge levels (figures 3 and 4 and column 4, lines 37-49) for effective operation of the device but fails to show an on-board engine used to recharge the electric battery or drive the electric components. However, Ullmann clearly teaches that it is well known to employ an engine 19 in concert with a power generator 20 to drive desired electrical mechanisms. Further, the control of and monitoring of such an engine to recharge the battery as well as monitor battery level is so well known (i.e., the voltage regulation system of any modern car) as to be an obvious choice of design. It would have been obvious to one having ordinary skill in the art at the time of the invention to provide the device of Kinugawa with the teachings of Ullmann in order to provide an earthworking machine having greater operational range.
